

# Mobile Worker

## Mobile Applications for Portable Terminals

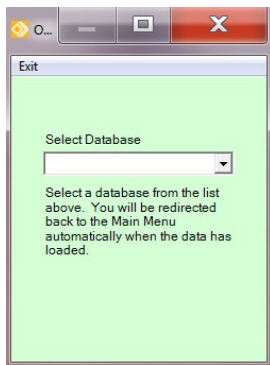

Integrates with existing PC software

The mobile AP application will allow you to import any CSV or excel file into a windows portable terminal where it will recreate the spread sheet format on the screen.

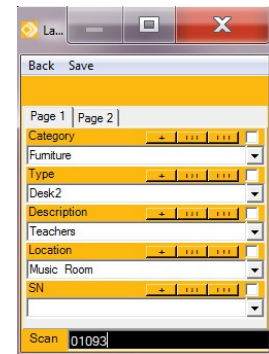

The data can then be manipulated or added to as required. The result of the mobile field work can then be exported as a CSV/excel file back to the server.

Offering a perfect way to carry out many different field applications without the need for speed PC software.

Can link directly with SAP, Sage, Quick books and many others.
