

# STOCK MASTER

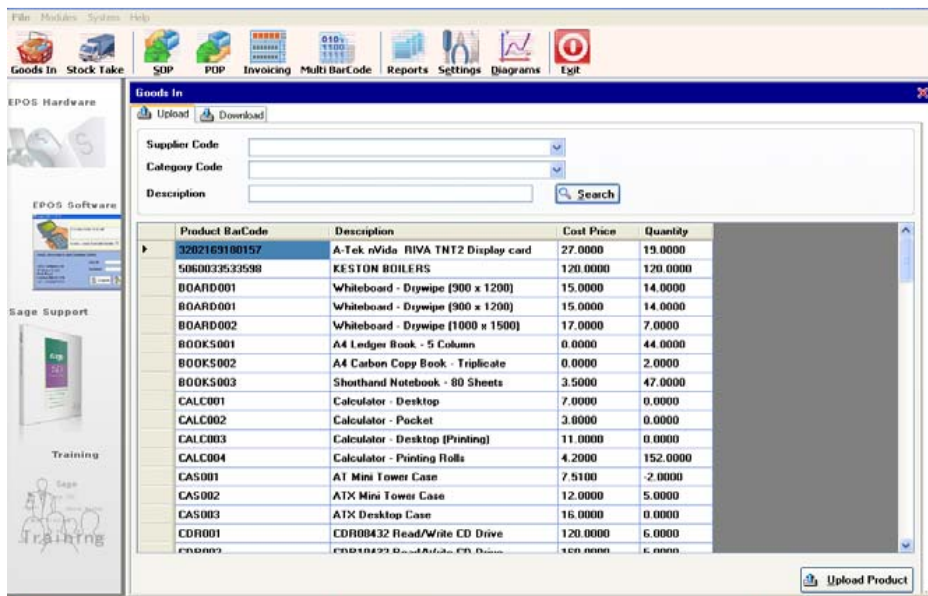

## Stock Master for Sage 50 / POS Enterprise

### Introducing HT630/HT660 Remote data capture Terminal Direct link to Sage 50

Stock Master utilises a range of reliable of Data Capture Terminals to capture bar-code representation of the Sage 50 Product Code. Capturing data in bar code form using a HT 630/HT 660 portable unit is often an ideal solution.

The windows based interface software displays all product codes, descriptions, and Sales prices along with the current quantity in stock. This information can be sorted in ascending or descending order.

The software allows you to create and send your own static data to the portable computer, together with any look up tables required for data verification. The application templates can be configured to meet most common data collection requirements such as goods in, stock take, mobile point of sale, sage invoicing, S.O.P Order picking and P.O.P receiving. Also the software allows transferring the data direct to sage 50.

Product BarCode	Description	Cost Price	Quantity
3202163100157	A-Tek nVida RIVA TNT2 Display card	27.0000	19.0000
